

Improving small-scale farmers' access to the appropriate farm inputs in Western Kenya

With support from the Rockefeller Foundation, FIPS-Africa works in partnership with co-operating private sector companies to extend its promotional concepts to improve the livelihoods of small-scale farmers in Vihiga, Kakamega, and Butere-Mumias districts in Western Kenya.

The main emphasis is on the promotion of improved fertilizers (e.g. *Mavuno*) and Maize Streak Virus (MSV)-tolerant and *Striga*-tolerant varieties.
